

ComicCraft – AI Comic Story Creator using Gemini Models

Project Overview

ComicCraft is an AI-powered web application that creates comic stories from a user's idea. It uses Google Gemini models to generate the story, characters, dialogues, scenes, and comic-panel descriptions.

Project Objective

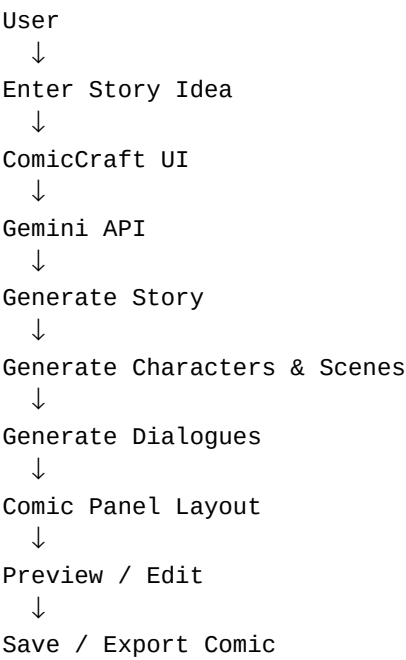

To build an easy-to-use platform where users can enter a simple story idea and transform it into a structured comic containing a title, characters, scenes, dialogues, and a complete comic sequence.

Example prompt: “A college student discovers a mysterious robot in his classroom.”

Main Modules

Module	Features
User Module	Register/Login, manage profile, view created comics
Comic Creator	Enter story prompt, select genre, select number of panels, generate comic
Gemini AI Module	Story, character, dialogue, scene and panel-description generation
Comic Editor	Edit characters/dialogues, rearrange panels, regenerate panels
Comic Library	Save, view, edit, delete, export and share comics

Basic Workflow

Suggested Technology Stack

Layer	Technology
Frontend	HTML, CSS, JavaScript / React
Backend	Node.js + Express
AI	Google Gemini API
Database	MongoDB
Authentication	JWT
API	REST API
Deployment	Vercel / Render

Database Design

Sample Generated Comic

Prompt: “A student travels back in time to meet his future self.”

Panel	Description
-------	-------------

1	A student discovers an ancient-looking device in his college laboratory.
2	The device activates and sends him 20 years into the future.
3	He meets an older version of himself.
4	Older Self: "You have only one chance to change what happens next."
5	The student returns to the present with a mysterious warning.
